Our Big 6.

We are glad that everybody is going to plant our Big 6 in 1895. These are six of the best fruits ever offered to the fruit eating public.

No. 1. LINCOLN CORELSS PEAR.
(See the other side.)

No. 2. McKINNEY'S MAY PEACH.
(The best early peach. Described in another circular.)

No. 3. EUREKA.
Yes, "I have found it!" the best early cling peach ever introduced. A seedling of Chinese Cling, originated near here. Medium size, oblong; cream white with red blush, tender and juicy and of very delicious flavor. Ripe June 15. Everyone who sees and eats this peach will be delighted. I expect to plant a large number of trees of this variety.

No. 4. GARDEN CLING.
Another seedling of the Chinese Cling, and superior to that variety in bearing and quality. This peach bore in 1894 when almost all peaches failed in this section. I sent this peach to a large peach grower of Georgia. He said, "I call it a very fine peach; I do not think I ever tasted a sweeter peach, and the fact of its bearing this year is a good point in its favor."

Wm. A. Taylor, Assistant Geologist at Washington, D. C., says: "Yours of the 25th of July and the sample peaches received. The fruit was in very good condition, and will, I think, be a good shipper."

Fruit large, oblong, creamy white with red blush, clingstone, and very solid flesh. Will keep a long time after being gathered.

No. 5. HUGHES IXL.
The best yellow cling October peach ever introduced. I have sold thousands of these trees and everybody is pleased. (See description in catalogue.)

No. 6. JAPAN PROLIFIC PLUM.
This plum should be called "Wonderful," as it is the most wonderful bearer of the largest and most delicious plums I have ever seen. (See description in another circular.)

All who plant the Big 6 will be happy and rejoice that they bought trees of the

ORCHARD HOME NURSERY.
THE LINCOLN CORELESS WINTER PEAR

In this circular I give a few testimonials with P. O. address of each, from parties living in Lincoln Co. Tenn. where this pear originated.

To understand how such a remarkable pear could have remained for so many years without having been more extensively propagated, it should be known that the original tree is situated far back among the hills of Lincoln Co. in a thinly settled part of the country where until within the last few years there was no great attention paid to the propagation of trees.

TESTIMONIALS

I here by testify, that the new pear, known as the Lincoln Coreless, originated in Lincoln Co. Tenn. That the fruit which is almost without core, or seed, is of unusual large size, specimens of it having weighed 1½ lbs. and is very handsome in appearance, a rich golden color when ripe and of an excellent quality and keeps perfectly sound until March.

The history of the original tree can be traced back for sixty years and so far as I have been able to learn has been free from blight and a regular and abundant bearer.

{ seal of Lincoln Co. }

W. C. Morgan, Clerk of Circuit Court Fayetteville Tenn.

Wm. Williams, Sheriff of Lincoln Co. 

E. S. Wilson, Clerk of Lincoln Co. Court 

I have seen the Coreless pear, cut one open and ate of it and can say, that it is large, shaped something like the Bell pear, green in color until it mellows about Christmas, then it is a beautiful golden color, juicy and a fine flavor.

The one that I saw was without core or seed solid meat, what I would call a fine winter pear.

(signed) David Tucker M. G. Fayetteville Tenn.

Mr. Tucker is a man that ought to know a good pear, as he has spent some time in California, as well as in many of the other states.

This is to certify that Mr. Mat Albright gave me two or three of the Lincoln Coreless pears, several years ago and I kept them until the 18th. of the ensuing March, and ate one of them about that time, it had scarcely any core and I can safely say that it is the best winter pear that I have ever seen.

(signed) W. C. Diemer Fayetteville Tenn.

I have known the Lincoln Coreless pear tree for several years and can say that it is a regular and abundant bearer, the best that I have ever seen for a pear.

(signed) I. H. Albright Camargo Tenn.

Your letter in regard to the old Lincoln C. pear tree received. In reply, Will say that I have known the old tree for many years, it is a regular and abundant bearer, the fruit is large and always hangs on the tree until ready to gather, it has no core nor seed and I believe it is the best keeper and the prettiest pear that I ever saw.

I have used the fruit and sold it both in Fayetteville Tenn. and Huntsville Ala. It is good enough, and I dont believe it can be excelled in the U. S.

I have heard a good many in this neighborhood say that they want trees of it.

(signed) John P. Walker. Molino Tenn May 27th. 1893

I do not say that this pear is entirely without core or seed, or that it is blight proof, but give the testimonials with address, of others living in the same Co. where the original tree has stood for fifty years or more.

I can furnish for fall season of 1893 spring 94 stocky well rooted one year old trees 4½ to 5 ft 3 to 4 ft. and 2 to 3 ft. Address

L. T. SANDERS PLAIN DEALING, LA.
